

Troforte[®] M Indoor & Patio

Slow/Controlled Release Microbial Granular Fertiliser

10-1.8-8 + TE

4 Months

TYPICAL ANALYSIS

MACRO ELEMENTS

Total Nitrogen (N)	10.00	%w/w
as Nitrate	1.70	%w/w
as Ammonium	2.15	%w/w
as Urea	6.15	%w/w
Total Phosphorus (P)	1.80	%w/w
Water Soluble	1.30	%w/w
Citrate Soluble	0.10	%w/w
Insoluble	0.40	%w/w
Total Potassium (K) as Sulphate	8.00	%w/w

MICRO ELEMENTS

Silicon (Si)	5.78	%w/w
Calcium (Ca)	5.03	%w/w
Sulphur (S)	3.63	%w/w
Iron (Fe)	2.20	%w/w
Magnesium (Mg)	1.01	%w/w
Zinc (Zn)	0.20	%w/w
Manganese (Mn)	3100	ppm
Copper (CU)	300	ppm
Boron (B)	94	ppm
Nickel	27	ppm
Molybdenum (Mo)	1	ppm

APPLICATION RECOMMENDATIONS

	Amount	At Planting Stage	Established Plants
Indoor and Patio Potted Plants	10cm Pot: 13gm 15cm Pot: 20gm 20cm Pot: 25gm 25cm Pot: 40gm 30cm Pot : 50gm	Incorporate into potting mix	Dig around dripline, 2cm away from stem
Garden Beds	180g per m ²	Spread over garden bed & mix into top 10cm of soil or mix into backfill soil	Spread around plant, 2cm away from stem or incorporate into top soil
Growing Media	Use 2-3kg/m ³ of growing media Medium rate is 2kg/m ³ High rate is 3kg/m ³		
	Water in thoroughly after application		

This product is a blend of naturally occurring ingredients and may have dust at times due to handling beyond manufacturer's control. It is recommended to wear a mask

Troforte[®] M – Indoor and Patio fertilizers contain a biologically coated, specifically engineered base, incorporating a specially selected suite of beneficial minerals and well researched and trialed Australian cultured beneficial soil microbes. These include bacteria and fungi to carry out a wide range of biological activities within the soil such as Nitrogen fixing, Nutrient building, producing growth hormones, decomposing organic matter to organic carbon, improving Soil Health and stimulating beneficial bacteria and fungi, as well as conditioning soils by improving soil structure. Multiple strains of beneficial microbes are incorporated - some of which include Azospirillum, Bacilli, Cellulolytic Fungi, Herbaspirillum, Phosphobacteria, Pseudomonas, Trichoderma and VAM (Mycorrhiza).

Some bacterial species break down minerals and release potassium, phosphorus, magnesium, calcium and iron to make them plant available while other species make and release natural plant growth hormones like auxins, gibberellins and cytokines.

It effectively and efficiently delivers nutrients to plant roots by enhancing soil biology. This also helps in increasing Soil Health, plant resilience and sustaining the population of beneficial microbes in the soil.

The Troforte[®] M range of fertilizers are a low analysis NPK fertilizers but more efficient, environmentally friendly and economical than high analysis chemical fertilizers.

STORAGE

The Troforte[®] M range of fertilizers have an exceptional shelf life and contains beneficial soil microbes that are activated when exposed to moisture. We recommend the storage of opened and unused fertilizer for a maximum of 11 months in a moisture - free environment to ensure best results upon application.

Apply at the beginning of every Spring and Autumn to maximize plant health and vigor.
