Garden Beds	6 Scoops per M ²	Spread over garden bed and mix into top 10cm of soil and Mix into backfill soil	Spread around plant, 2cm away from stem and incorporate into top soil
WATER IN THOROUGHLY AFTER APPLICATION. WATER OFF ANY FERTILISER OFF FOLIAGE. APPLY EVERY 5-6 MONTHS FOR BEST RESULTS			

Potted Plants – Troforte® M contains microbes therefore to ensure great results in potted plants, it is best to incorporate into the soil or simply make a few holes about halfway between the edge of the pot and the plant and pour Troforte® M in as per the above application rates. Cover the holes with soil and water in immediately.

Vegetables and Herbs in ground - Apply Troforte® M as per the above rates and lightly scratch into the surface with a garden rake or similar. It is very important to water in immediately after application to ensure that the microbes get activated.

Additional note: Although Troforte® M Vegetable and Herb is a 6 month formulation, it is advised to use one application every 4 months (especially during fruiting seasons) to ensure soils are kept at optimum levels.
